

- |                                      |                                      |
|--------------------------------------|--------------------------------------|
| S - sponge spicule                   | ○ nodule → e.g. (Py) - pyrite nodule |
| G1 - volcanic glass (ash)            |                                      |
| Py - pyrite                          |                                      |
| Q - quartz                           |                                      |
| F1 - feldspar                        | sh shell fragment (macro)            |
| Fe - secondary iron oxide            |                                      |
| Sf - silicoflagellates               | sh complete shell (macro)            |
| M - mica                             |                                      |
| Pyr - pyroxene                       |                                      |
| C.Sp. - calcareous (sponge) spicules |                                      |
| Ca - calcite (authigenic)            |                                      |

Figure 5. Standard symbols used to illustrate lithology.
