

- |       |                                |                 |                                    |
|-------|--------------------------------|-----------------|------------------------------------|
| S     | - sponge spicule               | ○               | nodule → e.g. (Py) - pyrite nodule |
| G1    | - volcanic glass (ash)         | ○ <sub>sh</sub> | shell fragment (macro)             |
| Py    | - pyrite                       | ○ <sub>sh</sub> | complete shell (macro)             |
| Q     | - quartz                       |                 |                                    |
| Fl    | - feldspar                     |                 |                                    |
| Fe    | - secondary iron oxide         |                 |                                    |
| Sf    | - silicoflagellates            |                 |                                    |
| M     | - mica                         |                 |                                    |
| Pyr   | - pyroxene                     |                 |                                    |
| C.Sp. | - calcareous (sponge) spicules |                 |                                    |
| Ca    | - calcite (authigenic)         |                 |                                    |

Figure 5. Standard symbols used to illustrate lithology.
