

Expedition 354 (Bengal Fan) cores received

On the 8th May 2015, the KCC received ca. 1.7 km of cores recovered from the Bay of Bengal, Indian Ocean by the US drill ship JOIDES Resolution during the IODP Expedition 354 (Bengal Fan). The cores were brought under refrigeration in 40-foot containers from Colombo, where the ship offloaded the cores. The core sections will be sequentially racked in the new reefer of the KCC over next few days. With this addition of the cores from the Indian Ocean, the KCC's IODP core collection has grown to ca. 111.1 km.
