

Expeditions 353 (Indian Monsoon Rainfall) cores received

On the 24th February 2015, the KCC received ca. 4.3 km of cores recovered from the Bay of Bengal, Indian Ocean by the US drill ship JOIDES Resolution during the IODP Expeditions 353 (Indian Monsoon Rainfall). The cores were brought under refrigeration in 40-foot containers from Singapore, where the ship offloaded the cores. These core sections will be sequentially racked in the new reefer. With this addition of the cores from the Indian Ocean, the KCC's IODP core collection has grown to ca. 109.4 km.
